DIGITAL LITERACY PROJECT REPORT

Name: Mohammad Ayaan Ganai

Registration Number: 25MIP10100

Course: Digital Literacy

TASK 1 – CREATE A DIGITAL LITERACY AWARENESS INFOGRAPHIC

For this project, I used Canva, an online graphic design tool, to create a visually engaging digital literacy poster.

Canva provided a wide range of templates, fonts, icons, and colour combinations.

It helped me design a professional and well-structured layout easily.

My poster focuses on the concept of digital literacy and its importance for students.

It highlights key aspects such as:

- Finding reliable information
- Evaluating sources
- Creating ethical content
- Communicating effectively online
- Staying safe on the internet

I also included sections on useful digital tools, safe internet practices, email etiquette, and building a positive online presence.

The design uses bold headings, icons, and contrasting colours to make the content clear and attractive.

One thing I found challenging was organizing a large amount of information without making the poster look cluttered.

Balancing design and readability required careful spacing, alignment, and font selection.

However, it was also interesting to experiment with different layouts and color schemes to make the poster visually appealing while still informative.

Overall, this project helped me understand both digital literacy concepts and basic design principles.

TASK 2 – BUILD YOUR STUDENT DIGITAL PORTFOLIO

I chose GitHub, LinkedIn and Kaggle, which are very useful platforms for students in the field of Artificial Intelligence and Machine Learning.

GitHub

- GitHub is a platform used to store, manage, and share coding projects.
- It is mainly used for version control and collaboration.
- I chose GitHub because it will help me save my Python and AI/ML projects in an organized way and also create a portfolio of my work.

LinkedIn

- LinkedIn is a professional networking platform.
- It is used to connect with teachers, professionals, and companies.
- It also helps in finding internships and job opportunities.
- I chose LinkedIn because it will help me build my professional profile and stay connected with the industry.

Kaggle

- Kaggle is a platform specially made for data science and machine learning.

- It provides datasets, notebooks, and competitions that help students improve their practical skills.
- I chose Kaggle because it gives hands-on experience in machine learning.

Over the next four years, I plan to use:

- GitHub for uploading projects
- LinkedIn for building professional connections
- Kaggle for practicing AI/ML skills

This will help improve my knowledge and career opportunities.

TASK 3 – EXPLORE CODING AND COLLABORATION PLATFORMS

PART A – Coding Practice

HackerRank is an online platform used for coding practice and skill development.

It provides programming questions on topics like:

- Python
- Problem-solving
- Data structures
- Algorithms

I chose HackerRank because it helps me improve my coding skills through regular practice and prepares me for technical tests and placements.

As an AI/ML student, strong programming skills are very important, and this platform helps in building logical thinking .

PART B – Google Workspace Collaboration

Google Forms is a tool used for creating surveys, quizzes, and feedback forms.

For this project, I used it to create a Digital Literacy Awareness Quiz for my batch mates.

It allows easy creation of multiple choice and short answer questions and automatically collects responses in an organized way.

I chose Google Forms because it is simple to use and very effective for educational purposes.

TASK 4 – DRAFT A PROFESSIONAL EMAIL & ETIQUETTE GUIDE

PART A – Write two professional emails

PART B – Create a Social Media Do's and Don'ts checklist

Poor digital communication can create serious misunderstandings and problems.

One common example is in a college group project.

Suppose one team member sends an important message in the class WhatsApp group about the submission deadline but writes it in a confusing way, such as mentioning the wrong date or not clearly stating the time .

As a result, some students may submit their part late, causing the entire project to be delayed and possibly receive lower marks.

This situation could have been handled differently by writing the message in a clear and direct format, for example:

“Project submission deadline: 28 March, 5:00 PM.”

The sender should also double-check the details and ask group members to confirm that they have understood the message.

Clear communication, proper wording, and confirmation can help avoid such issues.

TASK 5 – CYBERCRIME AWARENESS CASE STUDY & PREVENTION GUIDE

PART A - Case Study

PART B - Prevention Guide

While researching online safety, what surprised me the most was how easily cybercriminals can trick students through simple methods like:

- Fake links
- Phishing emails
- UPI collect requests

I was especially surprised to learn that many people lose money just by scanning a QR code or sharing an OTP without realizing the risk.

It made me understand that cyber fraud often happens because of small mistakes and lack of awareness rather than advanced hacking.

As a result, one habit I will personally change is being more careful before clicking on links or responding to payment-related messages.

I will always:

- Verify the sender
- Check the UPI ID
- Never share OTPs
- Protect personal details

This research has made me more aware, responsible, and digitally safe.
